

RPlay Voice Puck

The microphone on the table, the AI in your building.

It records the meeting or the consultation, the Mac writes the report or the note, and nothing goes to a cloud.

Concept render, not a photo. Round, about 110 mm across and 30 mm high, matte graphite.

Thinks on your Mac

Recognition, lexicon and reports run on a latest-generation M-series Mac in your own building. What is said at the table stays in the building.

Several pucks, one Mac

Every room gets a puck with its own key, and one Mac serves them all. You buy the pucks and run them on your own Mac, no subscription.

Honest about listening

The ring is red while it records and green when it does not. Nothing starts without a press or a scan; audio is deleted after transcription.

Concept specifications. Four microphones with beamforming, 360° up to 5 m · built-in speaker for spoken answers · the whole cap is the button, with an LED ring and a touch ring for volume · Wi-Fi to the Mac in your building, each puck with its own key · QR code and NFC tag · USB-C for power and firmware · 110 mm across, 30 mm high, heavy non-slip base.

The meeting room, step by step

1
Scan

NFC tap or QR opens RPlay on your phone with the room already chosen. A press on the puck confirms it.

2
Record

The ring turns red and the room knows it is listening. Stop with a double press or from the app; silence stops it too.

3
Transcription

The Mac in your building writes out who said what, with your lexicon for names and terms. Nothing goes to a cloud.

4
Report by mail

When the transcription is ready you get a mail: summary, attendees, to-dos, time and duration. The audio is deleted.

What lands in your mail

RPlay

Meeting report
Your meeting report is ready
Meeting room 2 · Saturday 25 October · 14:00 to 14:42 (42 minutes)
Attendees: Gery Pollet, Nadia Peeters, Rens Claes, Noor Halvik
Summary
Pilot on two sites from January. The gateway question for the Ghent site goes to Noor; the price per site follows before the pilot starts.
To-dos

- Gery: presentation and site information — next week
- Nadia: list of locations — Friday
- Rens: price per site — before the pilot

Open
Whether the second site needs its own gateway.
The full transcript is attached. The recording was deleted once the transcription was made.

Written on your Mac from the puck in Meeting room 2 · nothing left the building
RPlay — it just works.

The mail the Mac sends when the transcription is ready: summary, attendees, to-dos, time and duration.

Three rooms, one puck

Voice assistant, across the room

Read my new mail and tell me what is in my calendar tomorrow. Then tell Olivier that the quote is approved and that he can send it today, and remind me on Thursday to call him about the delivery date.

Meeting room, how it runs

The organiser scans the puck or presses the cap; the ring turns red and the puck streams to the Mac in the building. A double press, a tap in the app or silence stops it; the report is in the mail before the room is empty.

Consultation room, patient and doctor

Patient reports dyspnoea on exertion since two weeks, no chest pain, no fever, blood pressure 150 over 95. Start bisoprolol 2.5 mg once daily, blood test this week, control visit in three weeks with the results.

Four microphones tell the speakers apart. The Mac in your building does the transcription and the writing; the result is a mail, a note or a spoken answer. Nothing leaves the building.

One Mac, three set-ups

	Dictate	Assist	Vault
The Mac	Latest-generation M-series Mac, 16 GB	Latest-generation M-series Mac, 64 GB	Latest-generation M-series Mac, 128 GB
Runs on it	Speech to text with your lexicon; one puck as recorder or scribe	Plus a local language model and spoken answers; several rooms	Plus RPlay Vault (*): mail, files, calendar and business systems in one chat
For	One room, one person	A practice or an office	The whole company

(*) RPlay Vault is one Mac in your office that reads your mail, files, calendar and business systems overnight and answers in one chat during the day. Your data, your index and your keys stay with you.
